

SUPERCHARGED SCIENCE

HOMESCHOOL SCIENCE EDUCATION

Supercharged Science works with homeschool parents who are struggling to teach science. Our company serves families who want to expand their learning experience, but don't have enough time to prepare quality lessons, prep materials, or simply are frustrated with the current quality of science education available.

Supercharged Science offers a complete science learning program which contains everything you need, including materials, unlimited support, and even the teacher.

Just add kids. We take care of the rest.

PRAISE FOR SUPERCHARGED SCIENCE...

"My son, who never gave science a second glance, now attends the engineering program at MIT, which he was inspired to do because of a workshop you personally gave to his junior high school. Thank you - THANK YOU!" *Barbara Ann DuVall, Rotary Club, California*

"Thank you for making our boy scout meeting the best we have EVER had! Your Rocketry presentation was outstanding! We are booking you for many more this year!" *David Church, Boy Scout Troop Leader, Pack 6, California.*

"Aurora, YOU are the reason our enrichment program hit capacity in record time. You set up the learning environment so that it feels *good* to learn, and you break it down into very easy steps so everyone can handle it. Thanks for doing what you do and sharing it with us." *Judy Harris, Family Partnership Charter Homeschool Director, California*

"Schools are great a botany and life sciences, but when it comes to robots, electricity, and physics, kids are lost. Thanks for filling in the gap." *Jim Nett, 7th Grade Science Teacher, at Laguna Middle School*

"Aurora spoke at my son's class a few months ago and totally "wowed" the students who attended. It was amazing to hear them talk about her and their sudden interest in science. First thing they said was, 'Sign me up for ALL her camps, I love that teacher!' My son and his buddies raved about you for days!" *~Connie Hanretty, University Instructor, California.*

"I told my son he had to do his science lesson for just fifteen minutes each day, which was such a chore for him. One day I gave him this Supercharged Science Mastery program. Three hours later, he made us late for an appointment because he couldn't tear himself away! He watched the videos over and over and built things I've never seen before. Thank you so much!!!" *~Barbara & Matt, homeschool family in Valencia, California.*

Since 1996, **Aurora Lipper** has been helping families learn science. As a pilot, astronomer, engineer, rocket scientist, and former university instructor, Aurora can transform toilet paper tubes into real working radios and make laser light shows from Tupperware.

While working on her PhD in Combustion at Stanford University, she worked for a local children's museum, which sparked her interest and caused over 200 science classes to be developed and brought into the K-12 classroom.

Since then, we've worked with 25,000 kids in public, private, charter, and homeschool learning environments.

Now it's your turn!
